

Language Basics

Check all syntactically correct statements.

1.) Which input statements are correct?

- a = raw_input()
- a = raw_input("enter a number")
- a = raw_input(enter your name)

5.) Which are correct type conversions?

- int(7.0+0.1)
- str(1.2 * 3.4)
- float("77"+"0")
- str(9 / 0)

2.) Which print statements are correct?

- print "9" + "9"
- print int("nine")
- print str(9) + "nine"
- print 9 + 9
- nine = 9
print nine

6.) Which operations result in 8?

- 65 // 8
- 17 % 9
- 2 ** 4
- 64 ** 0.5

3.) Which are correct arithmetical operations?

- a = 1 * 2
- 2 = 1 + 1
- 5 + 6 = y
- seven = 3 * 4

7.) Which lines are commented?

- """This is a comment"""
- # This is a comment
- // this is a comment
- '''This is a comment'''

4.) Which are correct variable names?

- result
- my.result
- print
- resultt77

Data Types

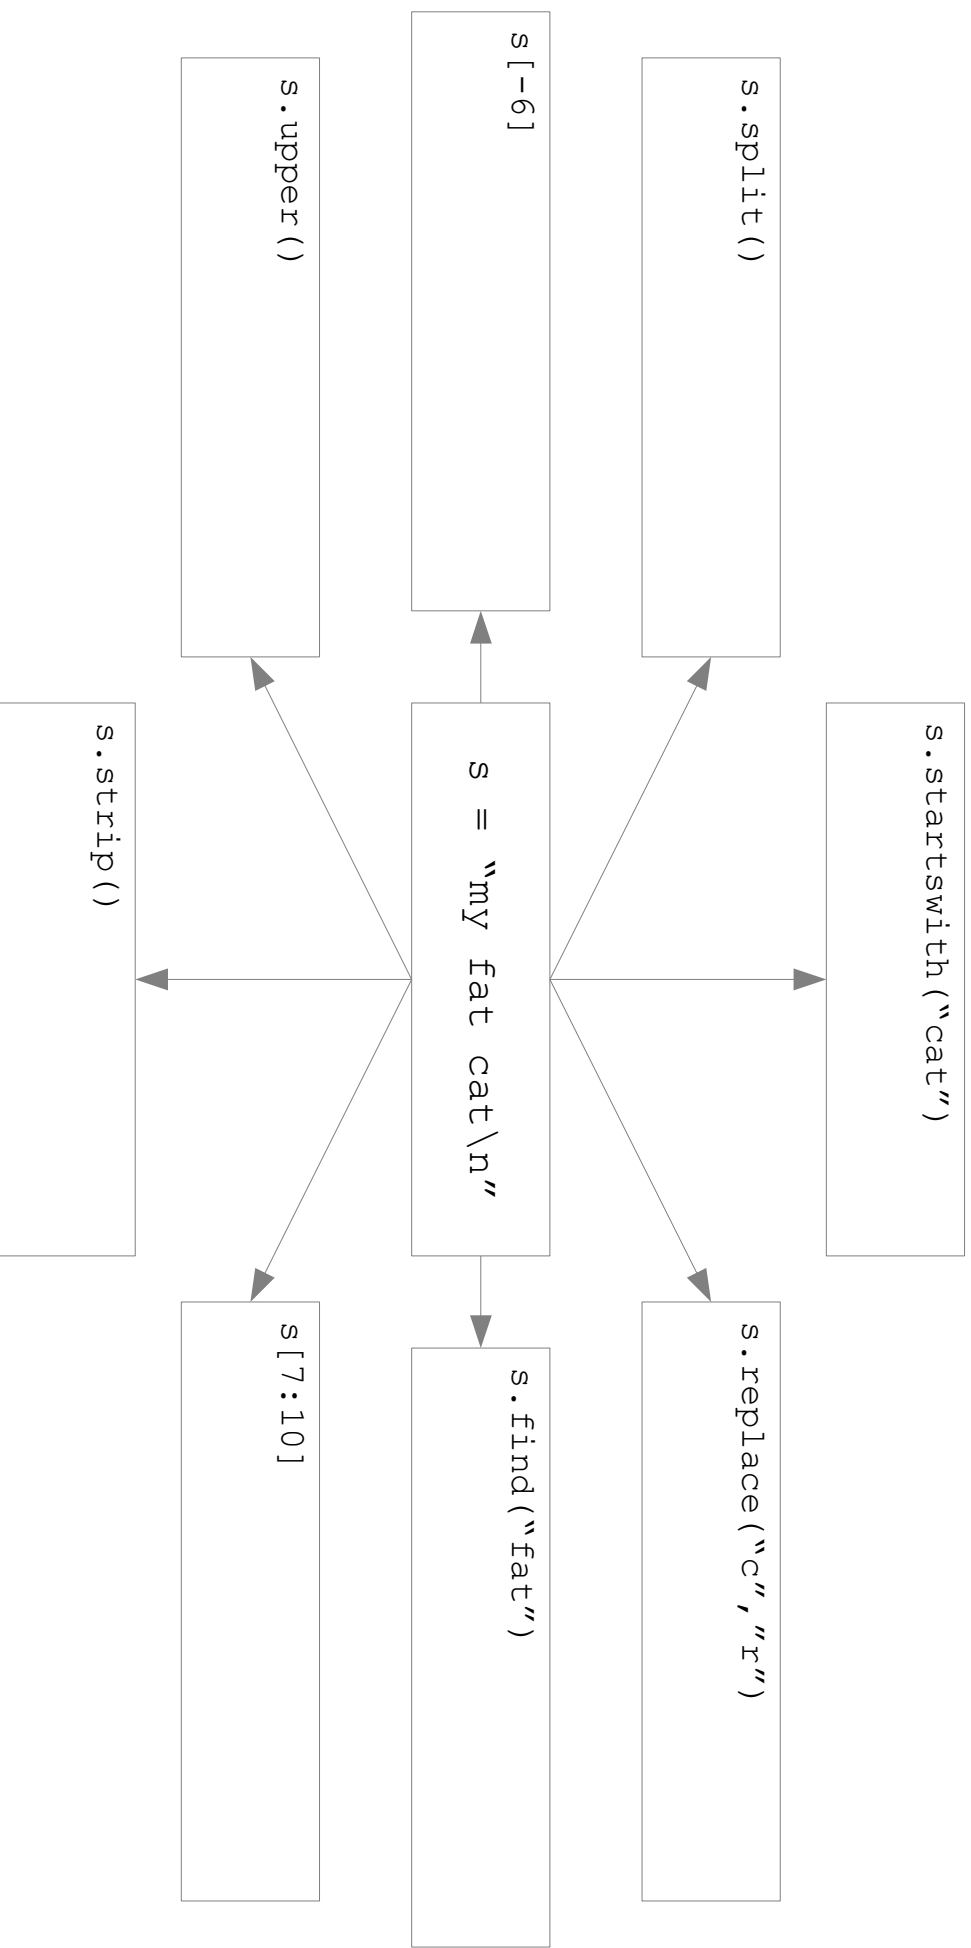

Find the matching pairs of expressions and values.

1023	boolean
None	int
[2, 4, 8, 16]	tuple
True	list
17.54	str
('Roger', 1952)	dict
"my fat cat"	NoneType
{'name': 'Roger', 'birth': 1952}	float

Manipulating Strings

Write the result of each operation into the fields.

String formatting

Find the matching pairs of expressions and values.

expressions

```
"R.%s" % ("GB")
```

```
"%2i. %4s" % (3, "RGB")
```

```
"%5.2f"%3.1415
```

```
'%s\t%s\tRG'% (B, '\t')
```

```
"%5i" % (3.1415)
```

```
"RG%iB" % (7)
```

values

3. RGB

3.14

R. GB

RG 7B

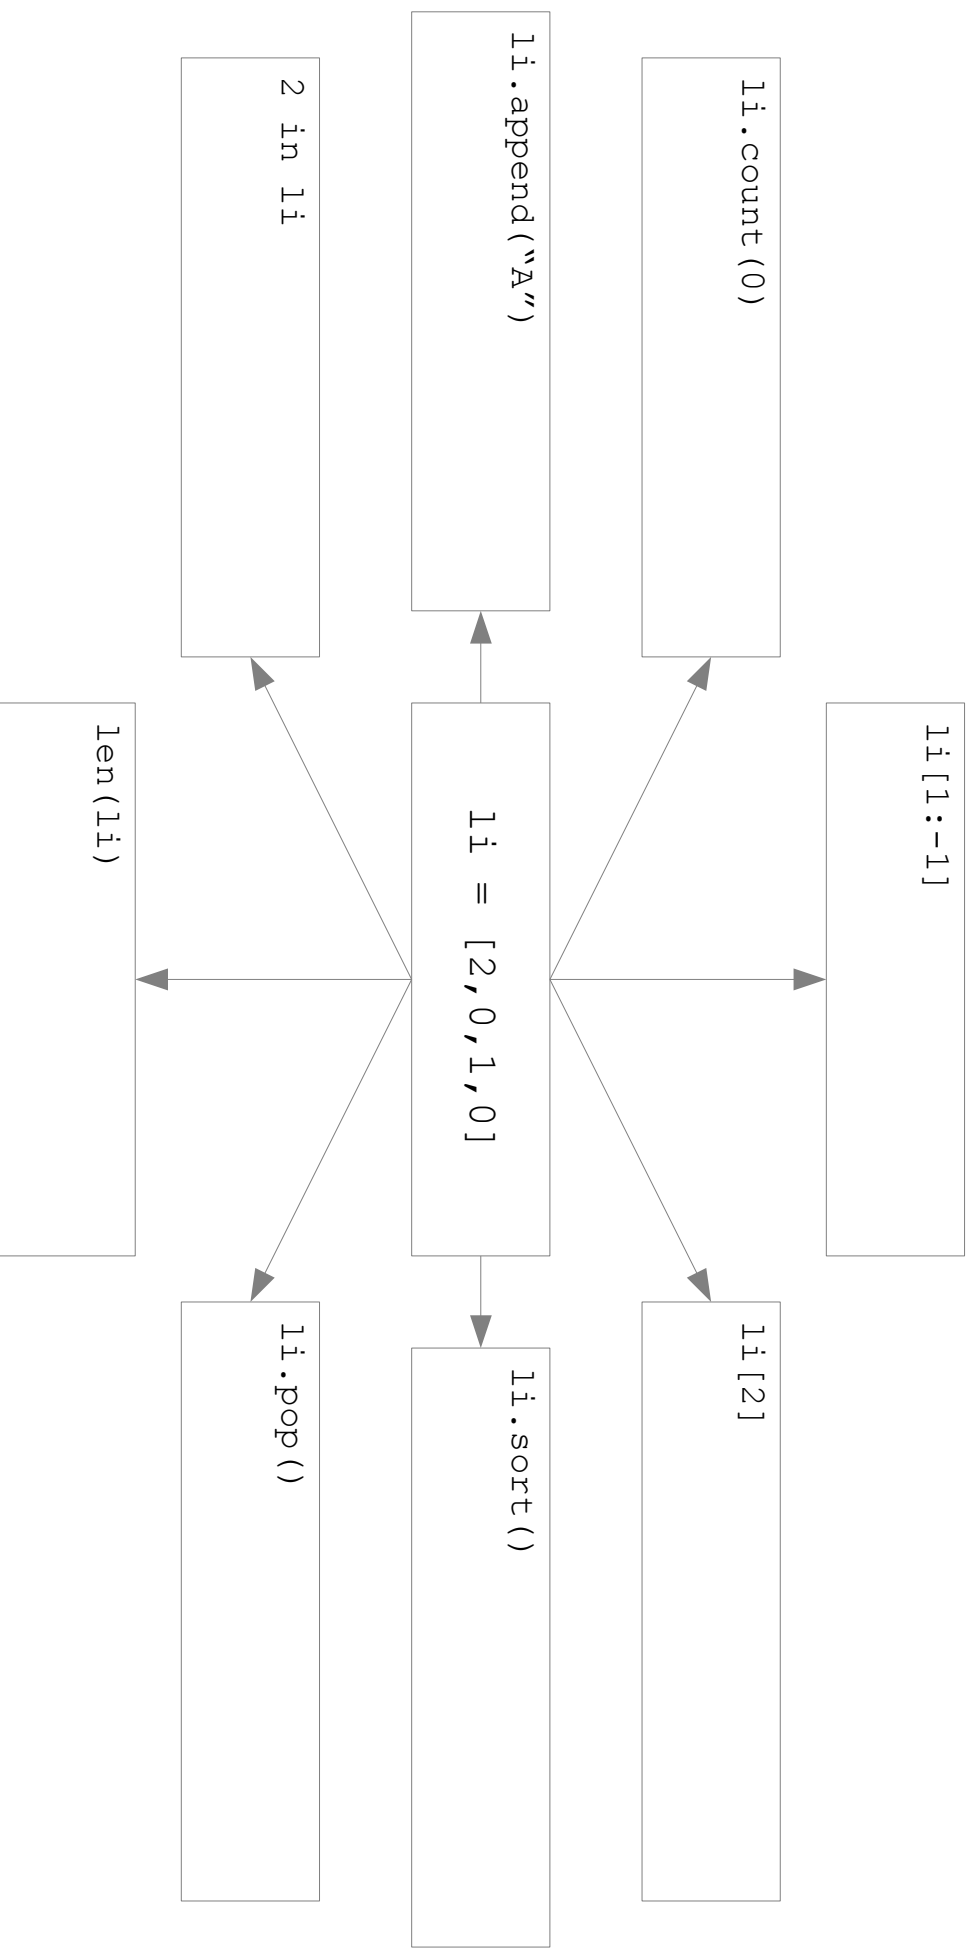

3

B RG

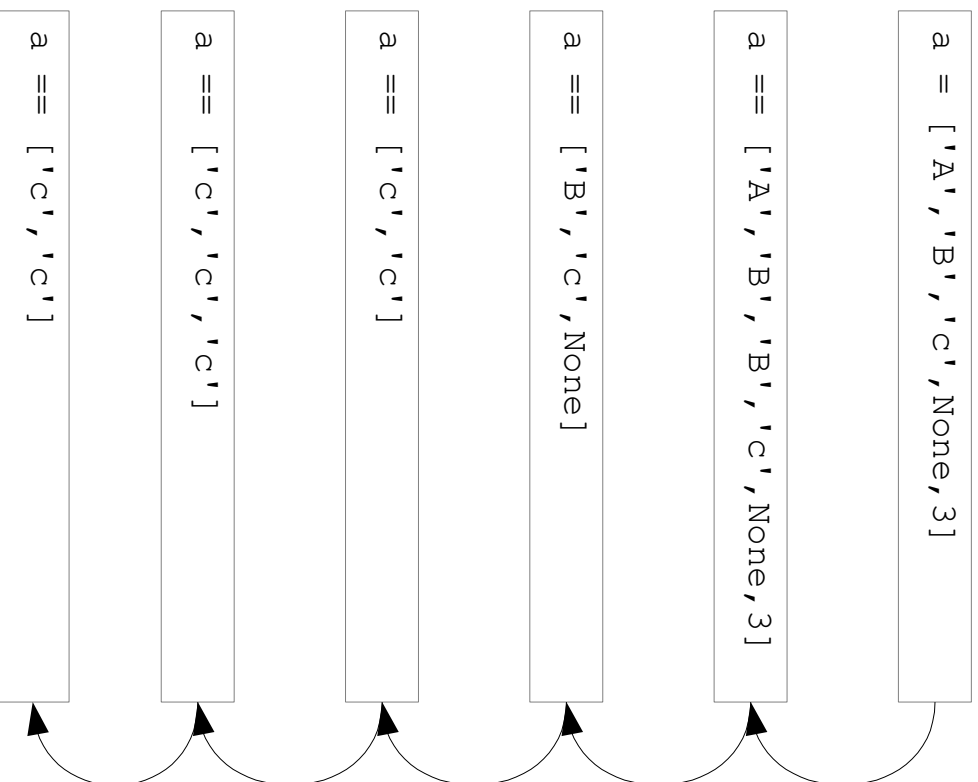

Manipulating Lists

Write the result of each operation into the fields.

Functions operating on lists (1)

Write the correct operations to the arrows.

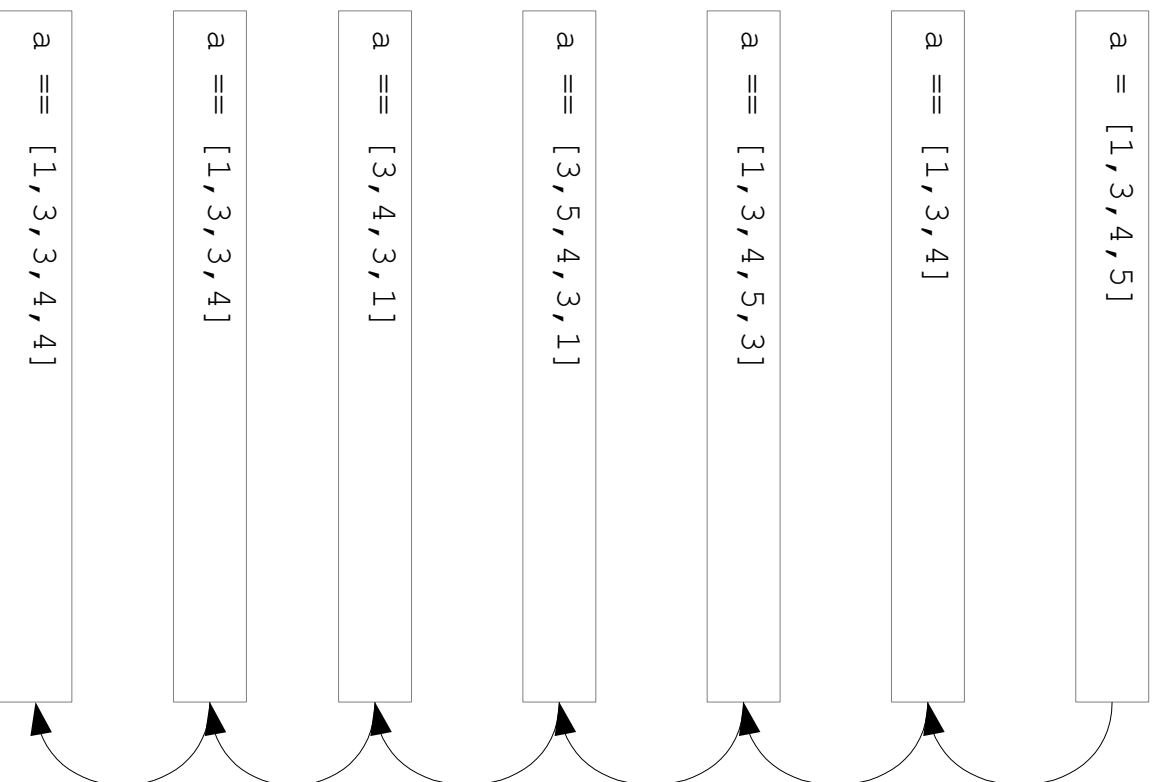

- 1 `a = a[2:5]`
- 2 `a = [a[-2]] + [a[1]]`
- 3 `a = a[:2]`
- 4 `a = [a[-1]]*3`
- 5 `a = a[:2] + a[1:]`

Functions operating on lists (2)

Write the correct operations to the arrows.

- 1 a.reverse ()
- 2 a.sort ()
- 3 a.pop ()
- 4 a.append (4)
- 5 a = a + [5, 3]
- 6 a.remove (5)

Manipulating Lists

Check the correct answer.

1.) What does the list *b* contain?

a = [8, 7, 6, 5, 4]

b = a[2:4]

[7, 6, 5]

[7, 6]

[6, 5]

[6, 5, 4]

2.) Which of the following code pieces results in

a == [2, 4, 6]

a = [1, 2, 3] * 2

a = [int(s) for s in "246"]

a = [x*2 for x in range(3)]

a = [2**1]+[2**2]+[2**3]

Working with Tuples

Check all correct answers.

1.) Which are correct tuples?

(1, 2, 3)

("Jack" "Knife")

('blue', [0, 0, 255])

[1, "word"]

2.) What are tuples good for?

Grouping data.

Managing values that change.

Running a for loop over them.

Sorting.

3.) On what data types does the len() function work on?

lists

dictionaries.

strings.

tuples.

Loops and conditional statements

Check the correct statements.

1.) Which of these while commands are correct?

- while a = 1:
- while a+7:
- while len(c)>10:
- while a and (b-2 == c):
- while b==1
- while s.find('c')>=0:

4.) Which of these for commands are correct?

- for char in "ABCD":
- for i in range(10):
- for num in (4, 6, 8):
- for k in 3+7:
- for (i=0; i<10; i+=1):
- for var in seq:

2.) Which of these statements are correct?

- 'while' is also called a conditional loop.
- The expression after while may contain function calls.
- It is possible to write endless while loops.
- The colon after while may be omitted.
- The code block after while is executed at least once.

5.) Which of these if statements are syntactically correct?

- if a and b:
- if len(s) == 23:
- if a but not b<3:
- if a ** 2 >= 49:
- if a != 3:
- if (a and b) or (c and d):

3.) What are possible structures of a conditional statement?

- if <expression> .. else
- if <expression> .. else if <expression>
- if <expression> .. elif <expression> .. else
- if <expression> .. elif <expression> .. else <expression>
- if <expression> .. else <expression> .. elif

While loops

Match the expressions for the while loops run the designated number of times

```
a = 5  
while  :  
    a = a - 1
```

5X

$a \neq 0$

```
a = 2  
while  :  
    a += 4
```

5X

$a \geq 0$

```
a = 2  
while  :  
    a = -a * 2
```

2X

$a < 19$

```
a = 7  
while  :  
    a -= 2
```

4X

$\text{abs}(a) < 7$
